

# HackerRank

*Campus Crew*

## Ambassador Handbook

# Welcome to HackerRank Campus Crew

**HackerRank Campus Crew** is a global community of students who bring HackerRank's technology, competitions, and career resources directly to their campuses. It exists to close the gap between classroom learning and industry-ready skill, by giving students hands-on access to the same assessment and practice tools used in real technical hiring.

As a Campus Crew Ambassador, you are HackerRank's representative on your campus. You bring coding competitions, hackathons, workshops, and tech talks to your peers, and in doing so, build a technical community that outlasts any single event.

## What success looks like:

- Running at least one HackerRank-platform event on your campus every month.
- Growing genuine engagement, not just a single one-off event.
- Reporting your events and winners promptly so rewards reach students without delay.
- Collaborating with other ambassadors and campus communities rather than working in isolation.

## Why it matters:

Consistent, well-run events are noticed. Strong ambassadors get priority consideration for HackerRank events and campaigns.

# The Campus Crew Ambassador Role

**The ambassador role centers on one goal:** growing genuine engagement with **HackerRank's** platform and technology on your campus. How you achieve that is largely up to you.

## Core dimensions of the role:

- Representing HackerRank accurately to your campus.
- Increasing awareness and platform adoption.
- Creating technical opportunities - contests, challenges, and sessions that build real skill.
- Building student communities that outlast a single event.
- Collaborating with existing clubs rather than competing with them.
- Connecting students with industry through resource persons and career content.
- Supporting HackerRank initiatives as they launch.
- Maintaining an active campus presence between events, not just during them.

## Creative freedom:

There is no single required format. A rigorous DSA contest, a casual hackathon, and a beginner-friendly workshop are all valid. Choose formats that fit your campus culture, your strengths, and what your peers are genuinely interested in.

# Ambassador Expectations

## Activity expectations:

- Run at least one HackerRank-platform event on your campus every month.
- Use HRW or HRC as the actual delivery platform - promotion alone does not satisfy this.
- Keep your event active on the dashboard for its full window, and monitor it while it runs.

## Professionalism and communication:

- Communicate clearly and respectfully with HackerRank staff, fellow ambassadors, speakers, judges, and participants.
- Keep community spaces focused on program-related discussion.
- Represent HackerRank's brand accurately - do not overstate benefits or misrepresent unofficial resources as official.

## Documentation and community building:

- Document every event with a short report and winner list.
- Invest in building a recurring audience, not just running isolated events.
- Support major HackerRank initiatives when they launch.

*These expectations exist to keep the program consistent and reliable for students - not to make the role feel bureaucratic. A short monthly report and a well-run event are usually all it takes.*

# What HackerRank Provides?

As an ambassador, you have access to a set of platforms, resources, and rewards designed to make it easy to run credible, valuable events.

| Resource                  | What it's for                                                                             |
|---------------------------|-------------------------------------------------------------------------------------------|
| HackerRank for Work (HRW) | Running coding tests, MCQs, and role-based technical assessments.                         |
| HRC (Contest Dashboard)   | A fallback contest platform, available before HRW access is active.                       |
| SkillUp                   | Student-facing learning paths, hands-on practice, and certifications.                     |
| Resource persons & judges | In-house HackerRank engineers, available for tech talks and hackathon judging on request. |
| HackerRank Infinity Plan  | A premium 1-year subscription awarded to event winners.                                   |
| Mock Interview credits    | AI-powered mock interview access awarded to event winners.                                |
| 1,500+ AI tools           | A curated bundle of AI tools, awarded to event winners for 6 months.                      |
| HackerRank Merch          | Branded merchandise, awarded to winners of larger events (300+ participants).             |
| Certificate templates     | Official templates for participation and winner certificates.                             |
| Brand assets              | Official logos and creative assets for event promotion.                                   |

# HackerRank for Work (HRW)

## Complete Guide

**HRW** is the primary platform ambassadors use to run assessments. It is a browser-based, enterprise-grade environment, the same technology used in real technical hiring with automated evaluation and detailed reporting.

### What you can build on HRW?:

- DSA and programming tests, ranging from beginner to advanced difficulty.
- Multiple-choice question (MCQ) assessments for aptitude or conceptual screening.
- Debugging challenges, where participants fix broken code against test cases.
- Role-based assessments - Full-Stack, Backend, Frontend, AI/ML Engineer, Data Engineer, DevOps, and more - using a built-in, browser-based coding environment.

### Setting up a test:

- Log in at [hackerrank.com/work/login](https://hackerrank.com/work/login)
- Create a new test and choose your question types and difficulty level.
- Select or write your questions, and preview each one before publishing.
- Set your contest window (start time, duration, and end time) with enough buffer for evaluation afterward.
- Lock the test once configured, so it remains private to your account.
- Publish and share the contest link - registration happens automatically as participants access the link.

# HackerRank for Work (HRW) Complete Guide (Continuation)

## During and after the test:

- Monitor live registrations and attempts from the contest's admin dashboard.
- Once the window closes, review the leaderboard and detailed per-participant reports.
- Export or record results before moving on to winner verification and reward submission

## Access and rollout:

- HRW access is activated for ambassadors in stages as they onboard. If your account is not active yet, use HRC to run your event in the meantime rather than delaying it.

## Platform Restrictions:

- The Chakra tab visible inside HRW is reserved for internal use and is not part of the ambassador toolkit. Do not attempt to access it. If you want to offer students an AI mock-interview style experience, request Mock Interview Credits from the Program Manager instead.

# Platform Comparison of HRW, HRC & SkillUp

Ambassadors work with three distinct platforms. Understanding the difference prevents the most common confusion new ambassadors run into.

| Platform | Primary Purpose                                 | Typical Usage                                                                                        |
|----------|-------------------------------------------------|------------------------------------------------------------------------------------------------------|
| HRW      | Enterprise-grade technical assessment platform. | Running your monthly coding tests, MCQs, and role-based assessments.                                 |
| HRC      | Standard contest-creation dashboard.            | Fallback platform while HRW access is pending, or for very large concurrent events.                  |
| SkillUp  | Learning and certification platform.            | Giving students self-paced access to learning paths and certifications not used to host your events. |

*If you are hosting an event, you're using HRW or HRC. If a student wants to learn and get certified on their own time, that's SkillUp.*

# Types of Events You Can Conduct

Ambassadors have full flexibility in choosing event formats. The formats below are the most common and effective; detailed playbooks for the two most involved formats coding contests and hackathons

## Coding Contests & DSA Tests:

- Timed, individual competitive programming tests on HRW/HRC. The simplest and most repeatable format — ideal for a fast, low-overhead monthly event.

## MCQ Tests

- Aptitude or conceptual assessments, useful for screening rounds or lower-barrier entry events that don't require deep coding experience.

## Debugging Tests:

- Participants fix broken code against test cases — a strong format for intermediate-to-advanced audiences and interview preparation.

## Development & Full-Stack Challenges:

- Role-based assessments in HRW's browser coding environment, well suited to upper-year students preparing for technical interviews.

## Hackathons & Codeathons:

- Longer-format, project-based competitions, individual or team-based, often combining a build phase with a HackerRank contest segment.

# Types of Events You Can Conduct (Continuation)

## Workshops & Bootcamps:

- Structured, instructor-led sessions building a specific skill over one or more sessions

## Tech Talks & Industry Sessions:

- Speaker-led sessions on a technical or career topic, optionally featuring a HackerRank resource person

## Quiz Sessions & Community Meetups:

- Lightweight, casual formats that keep your community engaged between larger events.

## Mock Interview Sessions:

- Practice interview sessions, which can draw on Mock Interview credits awarded through your event rewards.

## Inter-College & Cross-Campus Competitions:

- Larger events run jointly with other ambassadors or colleges

# Event Planning Framework

*Every event, regardless of format, moves through the same underlying stages. Use this framework to plan consistently and avoid missing a step.*

IDEA → PLAN → BUILD → TEST → PROMOTE → EXECUTE  
→ EVALUATE → REWARD → DOCUMENT → IMPROVE

| Stage    | What happens                                                                           |
|----------|----------------------------------------------------------------------------------------|
| Idea     | Choose a format and a goal — what should participants walk away with?                  |
| Plan     | Define objective, audience, expected participants, date, duration, platform, and team. |
| Build    | Prepare questions, rules, judging criteria, or curriculum, depending on format.        |
| Test     | Run through your contest, questions, and links yourself before publishing.             |
| Promote  | Share across your channels using the promotion timeline.                               |
| Execute  | Run the event, monitor the dashboard, and handle issues in real time.                  |
| Evaluate | Close the contest, review the leaderboard, and confirm winners.                        |
| Reward   | Submit verified winner details and issue certificates.                                 |
| Document | File a short event report.                                                             |
| Improve  | Note what worked and what you'd change before your next event.                         |

# Coding Contest – Standard Operating Procedure

1. Define your objective — skill-building, competitive ranking, or campus-wide visibility.
2. Select your format — DSA, MCQ, debugging, or role-based.
3. Select an appropriate difficulty level for your target audience.
4. Prepare or select your questions in HRW/HRC.
5. Configure the platform — time limits, scoring, and access settings.
6. Test every question yourself before publishing.
7. Create the contest and set its final configuration.
8. Set a realistic duration, with evaluation time built in separately.
9. Confirm registration is working correctly through the contest link.
10. Promote the event using your promotion timeline (Section 19).
11. Conduct the contest at its scheduled time.
12. Monitor the dashboard throughout the live window.
13. Resolve any issues immediately, while the contest is still live.
14. Finalize rankings once the contest closes.
15. Verify winner identities and their HackerRank-account emails.
16. Submit winner details to the Program Manager.
17. Track reward activation to confirm winners receive their benefits.
18. Issue certificates to all participants.
19. Publish results and congratulate winners publicly.
20. Document the event with a short report.
21. Review feedback and note improvements for next time.

# Hackathon-Standard Operating Procedure

## Design decisions:

- Theme and tracks: a focused theme gives submissions direction.
- Problem statements: open-ended prompts work well for creativity; specific ones work well for judging consistency.
- Eligibility: campus-wide, department-specific, or cross-college.
- Team formation: solo, fixed size, or open - state this clearly at registration.
- Technology restrictions: decide if any tech stack is allowed.

## Timeline and rules:

- Publish a clear timeline: registration deadline, hacking window, submission deadline, judging/results date.
- Define submission requirements: repo link, short write-up, demo video or live demo slot.
- State judging criteria up front.

**Judging:** Judging is the organizing ambassador's responsibility, unless a HackerRank engineer has been arranged as a judge, or the hackathon includes a contest segment that scores automatically.

**Judging criteria:** Technical execution, Creativity & originality, Problem relevance, Presentation.

**A practical structure:** Run a focused 1-2 hour HackerRank contest segment as part of the hackathon, rather than fitting the entire flow inside one contest window.

**Tie-breaking and results:** Decide your tie-breaking rule in advance. Announce winners promptly and move directly into certificates and reward submission.

# Workshops & Bootcamps

*Workshops and bootcamps build a specific skill over one or more sessions - DSA fundamentals, a development stack, AI/ML basics, or interview preparation are all strong topics.*

1. Choose a topic scoped to a single session, or a short series (2-3 sessions) for deeper skills.
2. Confirm a speaker - yourself, a team member, a club collaborator, or a requested HackerRank resource person.
3. Draft a simple curriculum or session outline, with a hands-on component wherever possible.
4. Set a duration appropriate to the material - most single sessions run 60-120 minutes.
5. Promote using your standard timeline.
6. Open registration, even if informal, to gauge turnout and plan the venue or online capacity.
7. Run the session with a hands-on activity - ideally one that uses a HackerRank test or practice problem.
8. Collect quick feedback at the end (a short form or a show of hands works fine).
9. Follow up with resources, a recap, and - where a HackerRank contest was used - certificates and results.

# Tech Talks & Industry Sessions

*Tech talks connect students with a technical or career topic, and can be delivered by you, another ambassador, a club collaborator, or a HackerRank engineer.*

**Requesting a HackerRank resource person:** For tech talks and hackathon judging, HackerRank can provide an in-house engineer as a speaker or judge. Request this from the Program Manager well in advance of your event date, since availability depends on scheduling - do not announce a HackerRank speaker publicly until it has been confirmed.

## Running the session:

- Prepare the topic and, where relevant, share context with your speaker in advance.
- Decide online or offline format based on your audience size and venue availability.
- Build in dedicated time for Q&A - this is often the most valuable part of the session for students.
- Collect feedback and issue certificates where appropriate.
- Post a short recap afterward to extend the session's reach beyond the room.

# Building Your Campus Team

*Running events solo works, especially early on. As your activity grows, a small team makes execution smoother and more sustainable.*

## Suggested team structure:

- **Campus Crew Lead (you):** overall ownership, HackerRank liaison, final decisions.
- **Technical Lead:** platform setup, contest configuration, troubleshooting.
- **Event Operations:** logistics, scheduling, on-the-day execution.
- **Outreach & Marketing:** promotion, cross-community reach, social media.
- **Design & Media:** posters, decks, and event visuals.
- **Community:** keeping participants engaged between events.
- **Documentation:** event reports, tracking, record-keeping.

For a single monthly campus event, a small core - a technical lead and an outreach lead alongside yourself - is usually enough. Scale up to the full structure only for larger, multi-college initiatives.

**Operating solo?:** If you don't have a team, that's fine - many ambassadors run events independently. If your reach is limited in a given month (e.g. exams), partnering with another ambassador for a joint or online event is a strong alternative to skipping the month.

# Building a HackerRank Community

*The most effective ambassadors build a lasting community, not just a sequence of events. A recurring, engaged group of students compounds in value over time - each event becomes easier to promote and better attended than the last.*

## Growing your community:

- Run events on a predictable rhythm (e.g. monthly) so students know what to expect.
- Create a simple way for interested students to stay in the loop - a group chat, mailing list, or club channel.
- Recognize repeat participants and standout performers publicly.
- Keep light-touch engagement going between events - a coding tip, a challenge of the week, or a relevant industry update.

**Working with existing clubs:** Most campuses already have coding clubs, developer communities, and technical societies. Rather than competing with these for attention, collaborate - co-host events, cross-promote, and share resources. This consistently produces stronger turnout than working in isolation, and avoids unnecessary competition for the same student audience.

# Cross-Campus Collaboration

*Ambassadors are encouraged to collaborate across colleges and regions, including internationally, to run joint or larger-scale events. There are no regional boundaries on who you can team up with.*

## **When to collaborate:**

- Your own campus reach is limited in a given month.
- You want to run a larger event than your campus alone can support.
- You're organizing an inter-college competition or a themed multi-campus initiative.

## **Practical guidance:**

- Agree on ownership early - who manages the platform, who manages promotion, and who is the point of contact with HackerRank.
- For international collaborations, agree on a shared time window that reasonably works across time zones.
- Keep a single, shared source of truth for the event plan and registration link to avoid duplicated or conflicting information.

# Rewards & Benefits

Winners of ambassador-run events are eligible for the following, based on total participant count:

## Fewer than 300 participants:

HackerRank Infinity Plan (1 year), Mock Interview credits, Access to 1,500+ AI tools (6-month access)

## 300 or more participants:

All of the above, plus HackerRank Merch

- **P.S.** Merch will be sent to the ambassadors as SPOC, and they can distribute it to the winners later.
- Winners are determined by leaderboard ranking on the HackerRank contest.
- Structure your winner tiers so rewards feel earned - a clear top-N cutoff works better than an oversized winner list that dilutes the value of the reward.
- All participants who complete a submission are eligible for a participation certificate, regardless of ranking.

**Welcome kit:** New ambassadors receive a shipped welcome kit after onboarding, typically including branded merchandise such as a hoodie, cap or bag, and stickers. Delivery timelines vary by location and current stock - allow several weeks.

HackerRank may also run periodic goody drops tied to active participation in community-wide initiatives, in addition to the standard welcome kit.

Program benefits and requirements may be updated periodically. Confirm the latest reward terms with the Program Manager before announcing them publicly.

# Winner Reward Activation

*HackerRank activates rewards directly for each winner's account once their details are received - ambassadors do not handle or distribute the rewards themselves.*

SELECT WINNERS -> VERIFY -> COLLECT DETAILS -> SUBMIT -> ACTIVATION -> WINNER CHECKS -> RESOLVE ISSUES

1. Sort your contest's leaderboard to confirm the final ranking of winners.
2. Verify each winner's identity and HackerRank account email address.
3. Collect each winner's full name and the exact email linked to their HackerRank account.
4. Submit the contest link and winner list to the Program Manager.
5. HackerRank activates the reward directly against each winner's account, typically the same day.
6. Ask winners to check their HackerRank account and inbox (including spam) for confirmation.
7. If a reward is missing, confirm the submitted email matches the winner's actual account, then escalate that specific winner's details to the Program Manager.

**Important:** always verify that the email you submit matches the winner's actual HackerRank account. A mismatched or personal email is the most common cause of delayed or missing rewards.

**Recommended turnaround:** Submit winner details within a day or two of your event closing, while participant information is still fresh and easy to verify.

# Certificates

*Certificates recognize every participant's effort and give winners a tangible record of their achievement.*

## Types:

- **Participation certificates:** issued to every participant who completes a submission.
- **Winner certificates:** issued to top-ranked participants, alongside their reward-tier benefits.

**Creating certificates:** Use HackerRank's official certificate templates, available from the Technical Lead. Always use the official HackerRank logo and branding - *never a modified or AI-generated version.*

**Certificate Templates Link:** [Click Here](#)

## Bulk-generating certificates with Canva:

1. Prepare a list of participant names in Excel or CSV format, with a column named "Name."
2. Open Canva and upload your certificate template.
3. Add a text box for the participant's name and format it as needed.
4. Go to Apps -> Bulk Create and upload your Excel/CSV file.
5. Connect the name text box to the Name column, then click Continue -> Generate Designs.
6. Canva creates one certificate per name automatically - download as PDF or PNG.

**Distribution:** Distribute certificates promptly after results are finalized. Announce winners publicly (with their permission) to give the recognition real visibility.

# Event Promotion & Marketing

*Strong promotion is often the difference between a well-attended event and an empty one. Use multiple channels rather than relying on a single post.*

## Channels to use:

- College and department groups, and coding/developer club channels.
- LinkedIn - the most effective channel for reach, recaps, and winner recognition.
- Instagram and other visual platforms, for posters.
- Posters and QR codes placed around campus for offline reach.
- Classroom outreach and word-of-mouth through fellow students.

## Recommended promotion timeline:

**T-14 days:** Announce the event and open registration.

**T-7 days:** Second promotion push; reach out to clubs and communities directly.

**T-3 days:** Reminder post; highlight rewards and what participants will gain.

**T-1 day:** Final reminder with joining/access details.

**Event day:** Live updates and encouragement to boost last-minute turnout.

**Post-event:** Recap, winner announcement, and thank-you to participants and collaborators.

**Supporting flagship initiatives:** From time to time, HackerRank runs flagship campaigns that ambassadors are invited to support through promotion and participation. Guidance and creative assets are shared by the Program Manager when each initiative launches.

# HackerRank Branding

*Here are some points to keep in mind for your posters and other sharables*

- Use the official HackerRank logo from the shared brand asset kit only - never an AI-generated or independently modified version.
- Refer to the program consistently as "HackerRank Campus Crew" across all promotion, posters, and social posts.
- Use approved creatives for flagship campaigns rather than creating your own from scratch where official assets exist.
- Do not represent any third-party form, group, or event as officially affiliated with HackerRank unless it has been confirmed by the Program Manager.
- When posting event recaps or winner announcements, tag HackerRank's official page and the program manager so the team can engage and reshare.

**HackerRank Brand Kit: [Click Here!](#)**

# Communication Protocol

## Contacts:

- **Program Manager (Sanskriti)** - rewards, onboarding, welcome kits, resource person/judge requests, general program queries.
- **Technical Lead (Sreesanth)** - HRW, SkillUp, and platform-related support.

## Guidelines:

- Use community/group spaces for event-related discussion and announcements that other ambassadors would benefit from seeing.
- Send individual queries, reward submissions, and winner lists via direct message rather than posting them openly.
- For urgent, event-breaking issues, contact the Program Manager or Technical Lead directly rather than waiting for a general reply.
- Avoid repeated follow-up messages asking for a faster response; queries are addressed in the order received.
- Response times may be slower during holidays, travel, or high-volume periods - build some buffer into your event timing.

**Communicating with college administration:** Describe the program accurately as a student-focused initiative. Avoid claiming a formal institutional partnership or specific college-level benefits unless explicitly confirmed by the Program Manager.

# Troubleshooting Manual

## No HRW activation email received

**Cause:** sent to your application email, may be in spam, or account is in an upcoming onboarding batch.

**Check:** both inbox and spam/junk for the email you applied with, including college-issued addresses.

**Do:** use HRC in the meantime so your event isn't delayed. Contact the Technical Lead if it genuinely never arrives.

## Contest link returns an error or disappears from the dashboard

**Cause:** a temporary platform issue, typically during high traffic.

**Check:** confirm the exact link and whether the contest still appears in your account.

**Do:** report immediately while the event is live - speed matters for recovery. Contact the Program Manager urgently.

## Contest closed before everyone finished

**Cause:** the contest reached its scheduled end time.

**Check:** whether the closing time was clearly communicated in advance.

**Do:** closed contests are not reopened. Build buffer time into future events and report access issues in real time.

## Winner hasn't received their reward

**Cause:** a mismatched email address, or a delay during a high-volume period.

**Check:** that the submitted email matches the winner's actual HackerRank account.

**Do:** confirm the email, then follow up with the Program Manager with that specific winner's details.

# Troubleshooting (continued)

## Welcome kit or hamper hasn't arrived

**Cause:** shipping timelines vary by location and current stock.

**Check:** how long it has actually been - several weeks is normal.

**Do:** allow several weeks before following up. If it has been over a month, check in with the Program Manager once.

## Another ambassador can see or edit your test

**Cause:** ambassador accounts share a single Campus Crew workspace.

**Check:** whether the test was locked immediately after creation.

**Do:** lock every test immediately after creating it to keep it private to your account.

## HRW access received but no SkillUp access yet

**Cause:** the two platforms are activated separately; SkillUp sometimes follows a few days behind HRW.

**Check:** how many days have passed since HRW activation.

**Do:** wait a few days; if SkillUp still hasn't arrived, follow up directly with the Technical Lead.

## Participant can't access the contest link

**Cause:** an incorrect link was shared, or the contest hasn't opened yet.

**Check:** the link matches exactly what's shown on your admin dashboard, and the contest window has started.

**Do:** re-share the correct link; if the issue affects multiple participants during a live event, report it immediately to the Program Manager or Technical Lead.

# Event Reporting & Privacy

*Event report - after every event, send a short report to the Program Manager alongside your winner list:*

- *Event name & date*
- *College / institution*
- *Organizer & team (names only)*
- *Event type: coding contest, MCQ, hackathon, workshop, or tech talk*
- *Objective: one line on the event's goal*
- *Platform used: HRW or HRC*
- *Contest / registration link*
- *Registrations & participants (from the contest's stats page)*
- *Completion rate: participants who submitted vs. registered*
- *Winners: name and HackerRank-registered email for each*
- *Certificates issued: Yes / No*
- *Social media links, if posted*
- *Outcomes & feedback: a short note on how it went*

## **Handling participant data responsibly:**

- Only share participant and winner details with the Program Manager directly, via direct message - not in open community spaces.
- Collect only what's needed to run the event and activate rewards (name and HackerRank account email).
- Be mindful when sharing screenshots or dashboards publicly - crop or redact personal details that aren't relevant to the post.
- Keep your own event records reasonably organized and limited to what's useful for reporting and future reference.

# Metrics & Growth

*Tracking the right numbers helps you understand what's working and make the case for bigger, better-supported events over time.*

- **Registrations and participants:** your core turnout numbers.
- **Completion rate:** how many registered participants actually submitted.
- **Departments and years reached:** a sign of how broad your audience is, not just how large.
- **Repeat participants:** the clearest signal of a genuinely engaged community.
- **Club collaborations:** how many events were co-hosted rather than run solo.
- **Event frequency:** consistency over time, not just a single strong event.
- **Social reach:** engagement on your promotional and recap posts.

*Focus on impact, not vanity numbers: a smaller, highly engaged, repeat audience is worth more to your campus community - and to your own track record - than a one-time spike in registrations.*

# Common Mistakes to Avoid

- Sharing a contest link before adding any questions to it.
- Not testing the platform, questions, or links before publishing.
- Using an AI-generated or modified HackerRank logo instead of the official brand asset.
- Calling a third-party form or community group "official HackerRank" without confirmation.
- Promising unconfirmed rewards, resource persons, or judges before they've been arranged.
- Submitting a winner's personal email instead of their HackerRank-account email.
- Delaying reward submission after an event closes.
- Structuring winner tiers so loosely that the reward feels unearned.
- Poor documentation - skipping the event report or winner records.
- Running events purely to inflate numbers rather than deliver genuine value.
- Not having a backup plan for technical issues on event day.
- Doing everything alone when a small team or collaboration would work better.
- Not following up with winners to confirm they received their rewards.

# Best Practices

- Prioritize event quality over headcount - a well-run smaller event builds more trust than a large, poorly organized one.
- Invest in your community, not just individual events.
- Plan your time realistically, with buffer for both promotion and post-event follow-up.
- Build a small, capable team as your activity grows.
- Communicate clearly and promptly, both with HackerRank and with participants.
- Promote across multiple channels rather than relying on one.
- Document consistently - it protects you and makes reporting effortless.
- Prioritize participant experience: clear instructions, working links, and fair judging.
- Always test the platform yourself before an event goes live.
- Submit winner details promptly and follow up until rewards are confirmed received.
- Collaborate across campuses when it strengthens the event.
- Treat every event as a chance to build your own event-management and leadership skills.

# Event Templates

*Ready-to-use templates for common ambassador communications.  
Adapt the bracketed placeholders to your event.*

## EVENT PROPOSAL

[Event Name] - Proposal

Objective: [what this event achieves]

Format: [coding contest / hackathon / workshop / tech talk]

Target audience: [who this is for]

Expected participants: [estimate]

Date & duration: [date/time window]

Platform: [HRW / HRC]

Team: [names/roles]

Rewards: [reward tier expected]

## EVENT ANNOUNCEMENT

# Complete Checklists

## BEFORE ANY EVENT

- ☐ Format and objective defined
- ☐ Platform configured and tested
- ☐ Team roles assigned (if applicable)
- ☐ Promotion plan scheduled

## EVENT DAY

- ☐ Contest/session live and accessible
- ☐ Dashboard actively monitored
- ☐ Issues reported immediately as they arise

## POST-EVENT

- ☐ Leaderboard reviewed and winners confirmed
- ☐ Certificates issued
- ☐ Winner details submitted for reward activation
- ☐ Event report filed
- ☐ Recap posted

## REWARD ACTIVATION

- ☐ Winner emails verified against HackerRank accounts
- ☐ Details submitted to Program Manager
- ☐ Winners confirmed receipt

# Frequently Asked Questions

**Q: Do I get free access to the 1,500+ AI tools myself, as an ambassador?**

A: No - this is a reward for winners of your events, not a personal perk for being an ambassador.

**Q: What's the difference between HRW and SkillUp?**

A: HRW is what you use to run tests for your campus. SkillUp is what your students use to learn and get certified.

**Q: My university isn't listed when creating a contest - what do I do?**

A: Select "Other" and type your university name manually.

**Q: Do I need a separate Google Form for event registrations?**

A: Generally no - the HackerRank contest link handles sign-ups automatically. A form can still be useful for outreach.

**Q: How is someone counted as a "participant" for reward purposes?**

A: Submitting an answer or code on the HackerRank test registers someone as a participant.

**Q: Can I create certificates myself, or does HackerRank send them?**

A: You create and distribute certificates yourself using HackerRank's official templates.

**Q: Where do I send my event report and winner list?**

A: Directly to the Program Manager, or the Technical Lead for platform-specific matters.

**Q: I can't reach many students this month - is that a problem?**

A: Team up with another ambassador for a joint or online event rather than skipping the month.

## FAQ (continued)

**Q: Is there a separate ambassador portal to log tasks or track progress?**

A: No - for now event tracking and communication happen directly through the HackerRank dashboards and your reporting via whatsapp.

**Q: Can I collaborate with an ambassador from another country?**

A: Yes - cross-region and international collaboration is encouraged.

**Q: Can HackerRank send a speaker or judge to my event?**

A: Yes, on request through the Program Manager, subject to availability - confirm before announcing it publicly.

**Q: What happens if I can't run an event in a given month?**

A: Communicate with the Program Manager, and consider a joint event with another ambassador as an alternative.

**Q: How do I know if I should use HRW or HRC?**

A: Use HRW if it's active on your account; use HRC as a fallback while HRW access is pending.

**Q: Do team members who help me get ambassador benefits automatically?**

A: Not automatically - check with the Program Manager about eligibility for team-based benefits.

**Q: What should I avoid promising participants?**

A: Specific rewards, speakers, or outcomes that haven't been confirmed.

# Ambassador Quick Reference

## MISSION

Represent HackerRank on campus and grow genuine engagement with its platforms through real, well-run events.

## KEY RESPONSIBILITIES

One HackerRank-platform event per month - Prompt, accurate reporting - Professional communication - Community building.

## EVENT TYPES

Coding contests - MCQ tests - Debugging challenges - Hackathons - Workshops - Tech talks - Community meetups.

## PLATFORMS

HRW - you run tests. HRC - fallback. SkillUp - students learn. Chakra - off-limits.

## REWARDS

<300 participants: Infinity Plan, Mock Interview credits, AI tools (6mo). 300+: add HackerRank Merch.

## WINNER PROCESS

Verify -> collect HackerRank-account emails -> submit to Program Manager -> activation -> confirm receipt.

## EVENT PROCESS

Idea -> Plan -> Build -> Test -> Promote -> Execute -> Evaluate -> Reward -> Document -> Improve.

**DO:** use the official logo and program name - verify winner emails before submitting - lock your tests - report issues immediately.

**DON'T:** promise unconfirmed speakers, judges, or rewards - access Chakra - post repeated follow-up pings - call unofficial resources "official HackerRank."

## IMPORTANT CONTACTS

- **Program Manager (Sanskriti)** - rewards, onboarding, resource persons, general queries.
- **Technical Lead (Sreesanth)** - HRW, SkillUp, platform support.

# Final Readiness Checklist

- ☐ I understand the Campus Crew mission.
- ☐ I understand my responsibilities.
- ☐ I understand the activity expectations.
- ☐ I know which events I can conduct.
- ☐ I understand HRW.
- ☐ I understand HRC and when to use it.
- ☐ I understand SkillUp.
- ☐ I know how to organize a coding contest.
- ☐ I know how to organize a hackathon.
- ☐ I know how to organize a workshop.
- ☐ I know how to request speakers and judges.
- ☐ I understand the reward tiers.
- ☐ I know how to submit winners for reward activation.
- ☐ I understand certificates.
- ☐ I know how to promote events effectively.
- ☐ I understand the branding guidelines.
- ☐ I know how to build a team and collaborate with others.
- ☐ I know how to report an event.
- ☐ I know how to troubleshoot common issues.
- ☐ I know how to communicate professionally with HackerRank.
- ☐ I know how to build a lasting campus community.

# HackerRank

## *Campus Crew*

You're ready. Run your first  
(or next) event, report it  
promptly, and keep the  
momentum going every month.

Welcome to  
HackerRank Campus Crew.
